

## **Technology**

Leverage information technology to provide our people with the tools they need to efficiently perform their duties and contribute to mission success. The link between information technology and people is clear and the success of any organization depends greatly on its ability to integrate these two resources. Continue to train and motivate the workforce, by providing training, challenging work assignments, and the automation tools required. Integrate emerging technology to meet organizational goals and provide world class support to the Warfighter.

Information Dominance connotes the successful integration of emerging technologies that enables tactical and strategic advantage by achieving situational awareness while denying information to the adversary. In support of the warfighter, information dominance is knowledge applied in the right context, at the right time to permit the unimpeded flow of passengers and/or cargo to their destination while providing In-transit Visibility/Total Asset Visibility (ITV/TAV) down to level six data. Information Dominance means sharing knowledge with our customers, partners, and stakeholders that enable us to conduct dynamic, end-to-end surface distribution management operations on a global basis.
